What is GATITO?

What is GATITO?

What is GATITO?

A photometric CALIBRATOR for TIGRE

- Photometric calibration: not possible now:
 - spend time in photometric stars
 - “aperture” (3”) too small
 - not photometric nights
- Unique feature
- Differential photometry with a small telescope and large FOV

Requirements

- Will not be an independent instrument!
- Telescope not very large and not very small
- Large FOV
- Large detector
- Derotator + Focuser + Filter wheel
- Large backfocus distance
- Telescope cover
- Linux

Where?

GATITO

Hamburg, Dec. 2016

Field of view

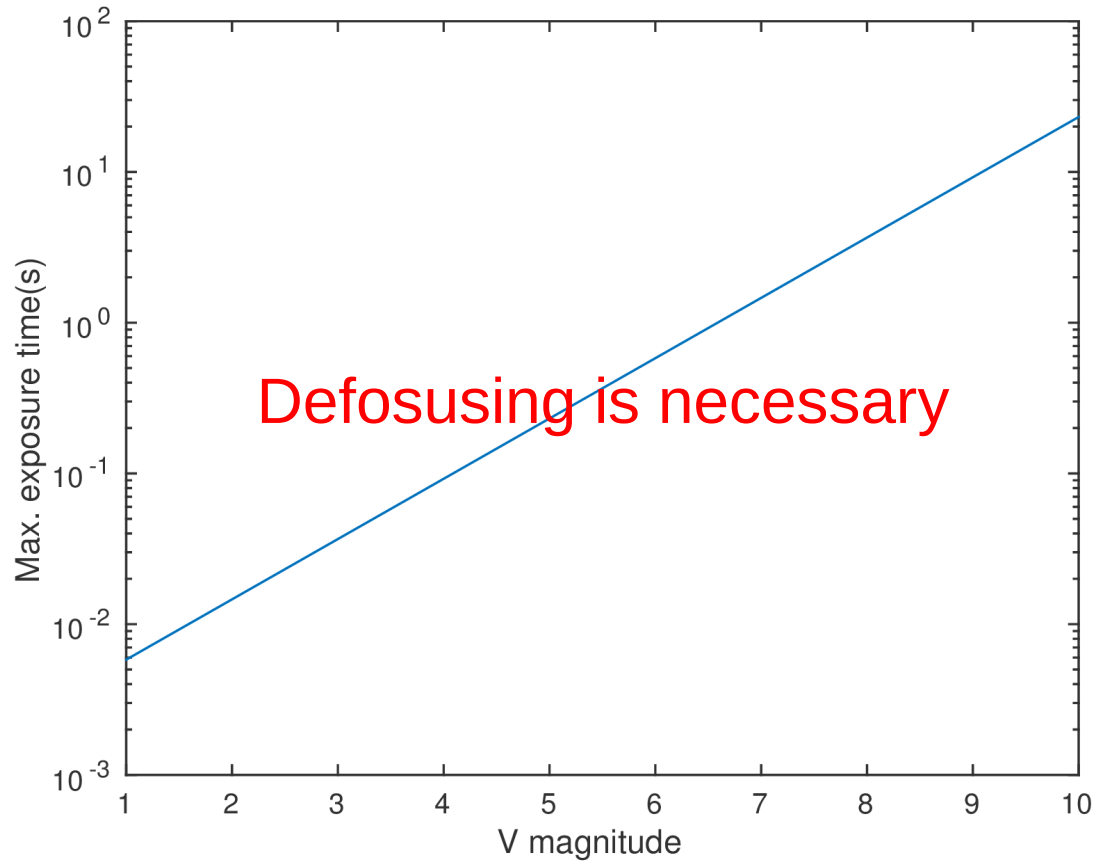

Saturation

For a Ø15cm telescope

Saturation

For a Ø15cm telescope

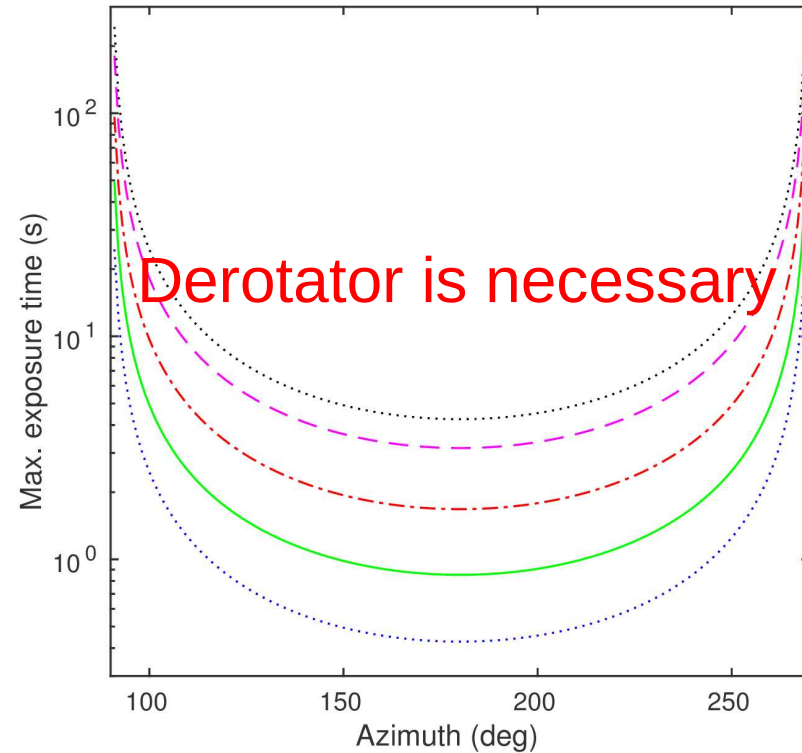

Field rotation

$$D\eta/dt \text{ (rad/h)} = -0.262 \cos(\text{lat}) * \cos(\text{az}) * \sin(\text{elev})$$

Field rotation

$$D\eta/dt \text{ (rad/h)} = -0.262 \cos(\text{lat}) * \cos(\text{az}) * \sin(\text{elev})$$

Proposed system

- Small telescope with $\text{Ø}15\text{cm}$ or photographic objective(?)
- CCD 36x36mm chip size (4Kx4K)
- Derotator/Focuser combi
- Filter wheel from CCD
- Filters Johnson B(V)R or SDSS gri
