The big picture

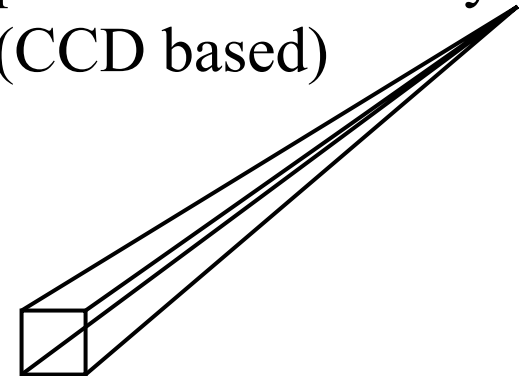

What is required?

Large, but shallow
all-sky surveys
(photographic)

Deep, but small
pencil-beam surveys
(CCD based)

Theory
(analytic, semi-analytic, numerical)

HDF:

Provides detailed information on distant galaxies.

Hubble Deep Field

ST ScI OPO January 15, 1996 R. Williams and the HDF Team (ST ScI) and NASA

HST WFPC2

The Millennium Galaxy Catalogue

Purpose:

- Replace photographic surveys as a resource to describe local galaxies.
- Provide benchmark for comparison with theory and high-z observations.

Photographic

MGC

MGC survey parameters

- Instrument: INT Wide Field Camera
 - Filter: B_{KPNO}
 - Area: 37.5 deg² (144 WFC fields)
30.9 deg² after cleaning > previous CCD surveys
 - B_{lim} : 24 mag
 - μ_{lim} : 26 mag/arcsec²
- } deeper than photographic surveys

The MGC in comparison

Photographic

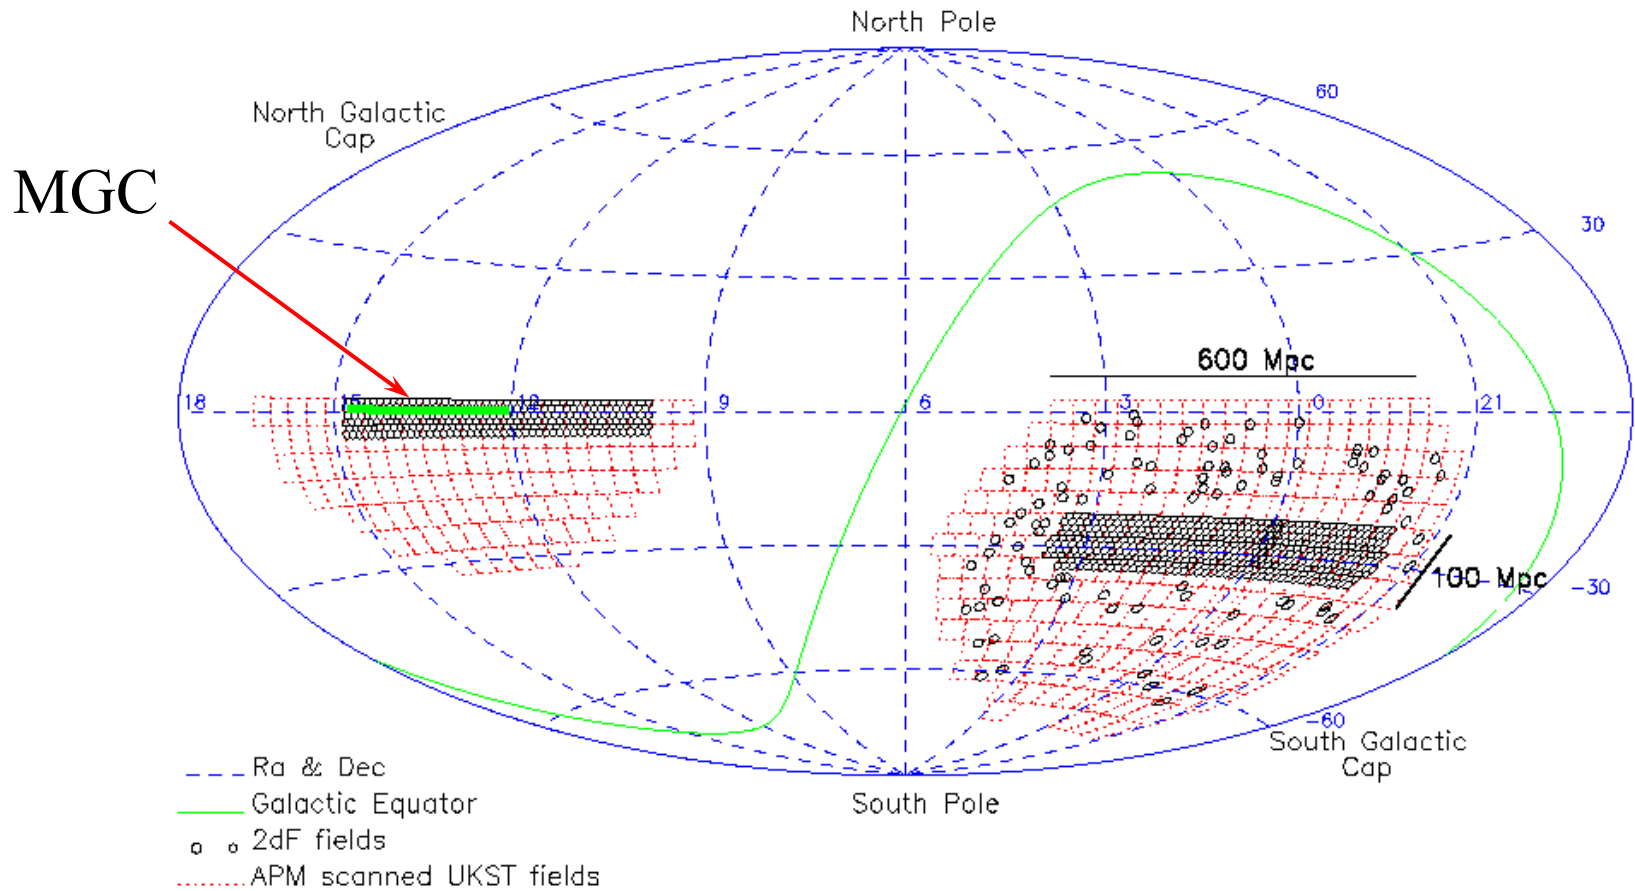

CCD

MGC survey region

$$9^{\text{h}} 58^{\text{m}} < \text{RA} < 14^{\text{h}} 47^{\text{m}}$$

$$-0.3^{\circ} < \text{DEC} < 0.3^{\circ}$$

MGC survey outline

MGC observational stats

$$t_{\text{exp}} = 750 \text{ s}$$

$$\text{Seeing} = 1.25''$$

$$\mu_{\text{lim}} = 26 \text{ mag}/\square^2$$

MGC example field

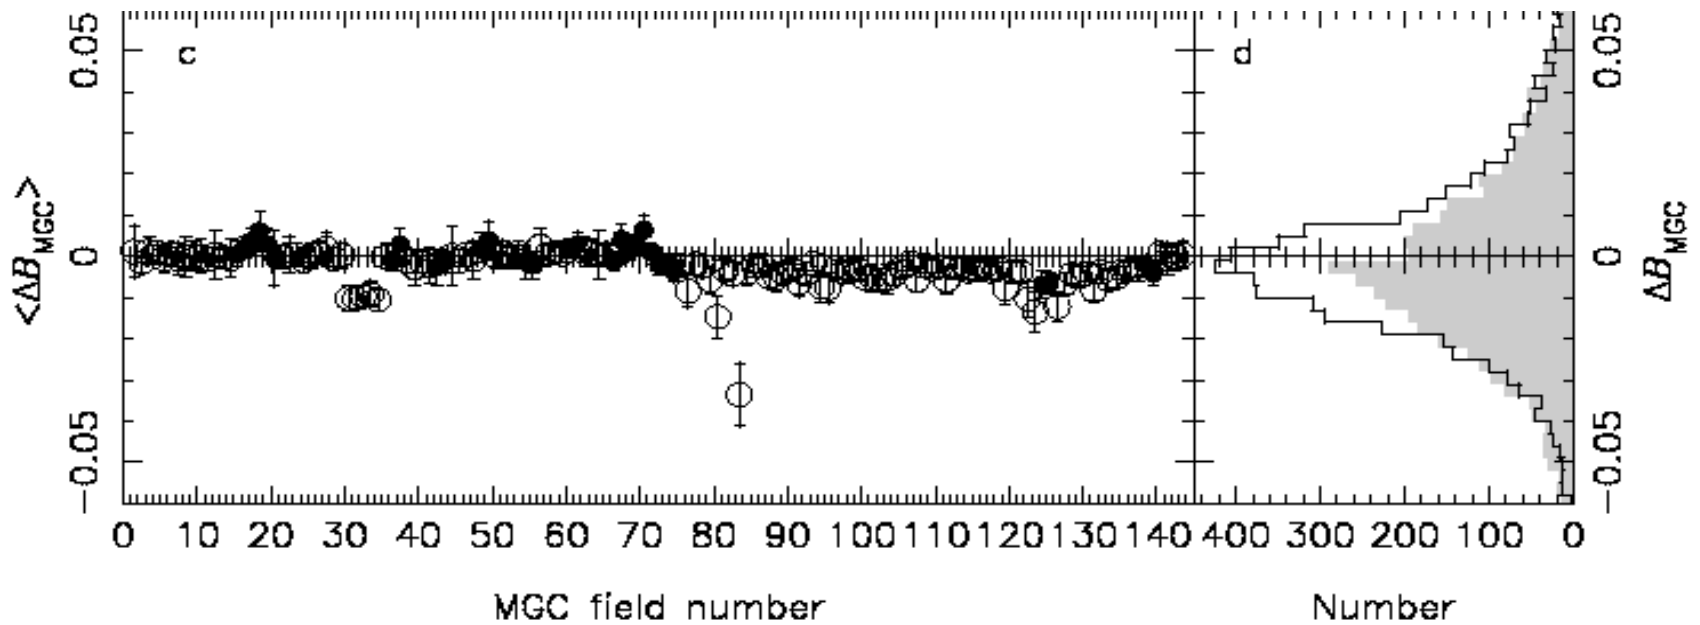

MGC example galaxies

deep imaging
+
good seeing
=
structural parameters
to $B_{\text{MGC}} = 20$ mag

Internal photometric accuracy

$$\sigma_{B_{MGC}} = 0.03 \text{ mag}$$

Data products

MGC-FAINT: $20 < B_{\text{MGC}} < 24$

650,000 galaxies

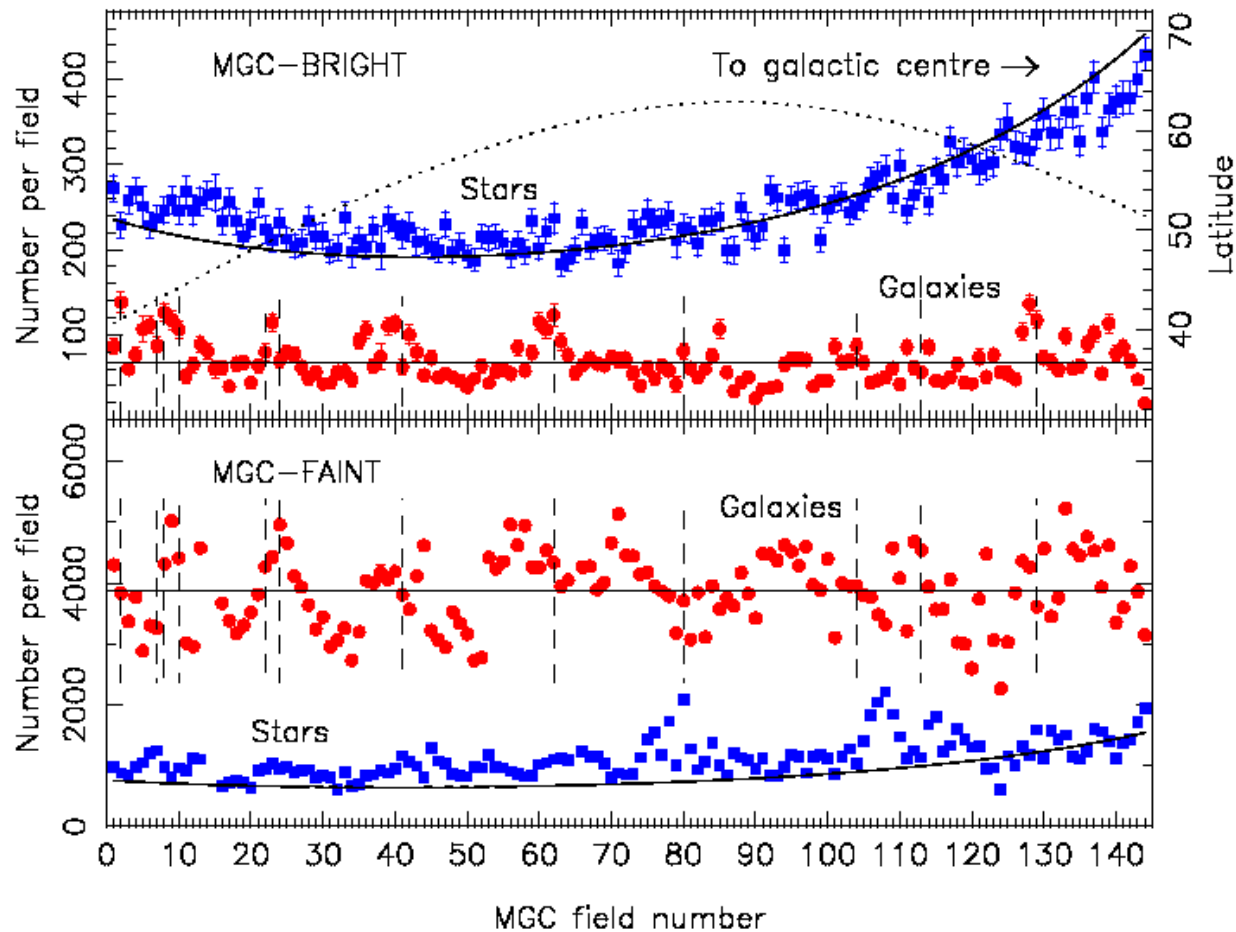

- *B*-band photometry
- shape parameters
- isophotal areas

MGC-BRIGHT: $16 < B_{\text{MGC}} < 20$

9800 galaxies

- *uBgriz* photometry (SDSS)
- redshifts (2dFGRS, SDSS, MGCz)
- morphologies
- structural parameters
- spectral classification

Luminosity density

A volume limited BBD

Beyond LFs: the BBD

- (SB selection effects ‘built in’.)
- HR-diagram of galaxies (i.e. physics of galaxy formation and evolution)?

Dwarfs in voids

N-body simulation
of dark matter

+

Cluster

Void

semi-analytic prescriptions
for cooling, star formation, etc.

Summary

- The MGC is a unique database for studying the local galaxy population.
- Provides detailed information necessary for meaningful comparison with both high-z observations and theory.

Project timeline

Base-catalogue definition complete

To do:

- Measurement of morphologies and structural parameters
- MGC redshift campaign
→ 2dFGRS completeness
- Luminosity functions(disk-to-bulge ratio)
- Bivariate Brightness Distribution
- Dwarf galaxies in voids
